Module 1

Fundamentals – Review++

WT 1-1 Import a basic Mule project into Anypoint Studio

Import the starter project

Create a new project

WT 1-2 Fundamentals review++

Module 2

Variables, Functions, Modules

WT 2-1 Organize DataWeave code with variables and functions

WT 2-2 Reuse DataWeave transformations

WT 2-3 Create and use DataWeave modules

Module 3

Defensive programming

Module 4

Operating on Arrays and Objects

Module 5

The Arrays and Objects Modules

Module 6

Flights and Airports

Module 7

Recursion
